QUARTERLY REPORT – PUBLIC PAGE

Date of Report: November 30, 2006

Contract No: DTPH56-06-000014

Prepared For: United States Department of Transportation

Pipeline and Hazardous Materials Safety Administration

Office of Pipeline Safety

Project Title: Validation and Documentation of Tensile Strain Limit Design

Models for Pipelines

Prepared By: Marina Q. Smith, Team Project Manager and Technical Coordinator

Pipeline Research Council, International

For Quarterly Period

November 30, 2006

Ending:

Progress to Date

This project, funded by PHMSA, PRCI, and several other industry partners is aimed at developing strain capacity models and documented procedures for establishing tensile strain capacity limits. Industry partners directly participating in the study include BP, Chevron, Duke, El Paso, Enbridge, ExxonMobil, Gassco, Gaz de France, IPSCO, JFE Steel Corporation, Lincoln Electric, Nippon Steel, Pacific Gas & Electric, Petrobras, Saudi Aramco, SoCalGas, TransCanada PipeLines Limited, TAMSA and Williams.

The primary objectives for the research are to:

- obtain high quality test data to identify the dominant parameters governing the tensile strain capacity of pressurized pipes;
- building on previous work, apply test data to assess the accuracy of existing numerical and engineering models, modify the models to improve accuracy and identify requirements for second generation model development;
- prepare a state-of-the-art guidance document to establish tensile strain limits based on existing SBD models; and
- develop second generation tensile strain limit models and SBD procedures.

These objectives will be achieved through a well planned and executed experimental testing program from small- to medium- and large-scale, and advanced computational modeling that reflects material's micro-scale response and global structure response.

The project is comprised of the following tasks:

- 1. Initial Analysis and Test Matrix Development
- 2. Pipe Acquisition and Specimen Fabrication
- 3. Small-Scale Material Tests
- 4. Full-Scale Small Diameter Pipe Tension Tests
- 5. Analysis of Full-Scale Small Diameter Pipe Tension Tests
- 6. Full-Scale Large Diameter Pipe Tension Tests
- 7. Medium-Scale Curved Wide Plate Tests
- 8. Model Verification and Modification
- 9. Initial Guidance Document Preparation
- 10. Progress, Planning and Review Meetings
- 11. Reporting and Final Presentation
- 12. Program Management
- 13. Focused Presentation to PHMSA/OPS

The Research Team has investigated proposed refinements to the physical testing plan, developed the specifications for materials to be used in the program and initiated efforts to procure pipes. Because of the delay in negotiation of final contracts with the Research Team, technical project activities were not initiated until October 2, 2006. The modified schedule of activities is being submitted as contract modifications to PHMSA and the Research Team members.
